#### Abstract

In the previous fiscal year, we conducted trial production in the Asian region, where ALOS-2/PALSAR-2 ScanSAR data are abundant, and were able to produce a high-resolution land-use and land-cover (HRLULC) map of the Asian region with a high overall accuracy of 86.2%. In order to further improve the accuracy, a global water map, which is also effective for LULC classification, was created from ALOS-2/PALSAR-2 data this fiscal year.

#### Reasons and benefits of using JAXA Supercomputer System

Accelerating large-scale high-resolution satellite image processing using machine learning with JSS3

#### Achievements of the Year

The use of JSS3 enabled the classification process, which originally took several days to several months, to be carried out in about one day. This allowed us to conduct many classification trials and create a global water map.
